

## CABLE SOCKS

Cable hauling socks (grips) are a great tool when hauling cable, they fit over the end of your cable and contract when pulling tension is applied to the eye.

Simply slip over your cable, tape around the end of the sock, and connect your cable and grip to the haul rope, being sure to have a rated swivel in between to prevent damaging the cable. **Note: Always check with the cable manufacturer for the maximum permissible tension allowed via a sock.**

There is a myriad of cable socks to suit different size cables and applications. Our most common socks for hauling is, a single eye, Galvanised Strand with an Alloy Ferrule. However, we also offer stainless or nonconductive and non-metallic weave material socks, socks with thimble and ones with copper and stainless Ferrules.

- Single Eye Cable Sock - used in most underground hauling applications.
- Double Eye Cable Sock - for suspension.
- Lace Up Cable Sock - used as an intermediate or assistant sock.

**Note:** Cable socks for overhead hauling are different to general purpose socks. These socks have a different weave and have a stronger rating. It is important to let us know if you are wanting a sock for overhead application.

We also have a range of Fibre Hauling Socks, and available upon request we can supply socks that are Open Both End, Light Duty, Heavy Duty, Double Eye Lace-up, Non – Conductive Cable socks and More!

**Please chat to us about your requirements and we'll recommend the best sock to suit your needs.**

### Single Eye Cable Sock

Galvanised Strand Alloy Ferrule

PRODUCT CODE	SIZE (MM)	SWL (KGS)	LENGTH (MM)
