

PIT LID LIFTERS

At Powerhowse Electric we offer two types of Pit Lid Lifters proudly designed and manufactured at our Auckland Factory; the frames fabricated from steel.

The Manual **Manhole Pit Lid Lifter**, electroplated, easy to use and makes lifting the cover off a manhole uncomplicated to do. Place the lifting eye in the lid slot, leverage down on the lifting bar and wheel the lid out of the way once it has lifted out of the manhole.

For heavy staunch lids, our **Hydraulic Pit Lid Lifter** can be applied. Galvanized for protection from the weather, the Hydraulic Pit Lid Lifter comes **with Part A and B Frames with wheels, 2x 6T Bottle jacks for stack loads, 4x Lifting Eye Keys**. Max weight with the two frames can carry is 800kgs.

Manual Manhole/Pit Lid Lifter
