

TANK LEVEL INDICATOR

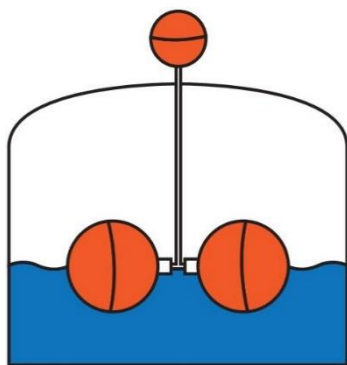

The Water Vane Company's **Original Tank Level Indicator** is proudly manufactured by Powerhowse Electric. The frame is fabricated from 304 stainless steel in our Auckland Workshop. Easy to install (fitting instructions and hardware supplied), it will fit on any tank regardless of the roof angle.

On most standard 2-meter-high tanks, when the top float sits on the mounting bracket, there is approx. 1000 litres of water left in your tank, this assists you from running completely out of water and causing expensive pump burnouts. The bright orange top float allows for high visibility in most weathers.

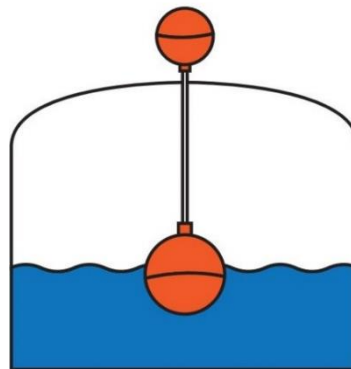

In this range we also supply an **Extension Kit**. Available in 500mm and 800mm, these kits fit all The Water Vane Co 'screw together type indicators' with no special tools or fitting required. Everything needed is included in the kit.

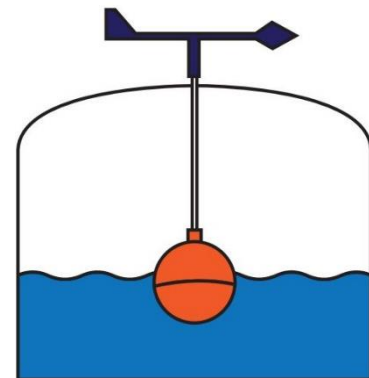

You can also turn your level indicator into a wind indicator with the **Optional Wind Direction Top**. This is a dual-purpose tool which is simple to install by removing the top ball and replacing it with the wind indicator. Handy for tanks that are in close proximity to the home.
